Board Game Insert
Instruction

Player Boxes P1 - P4 hold the Ship, Agent & Flagship Pieces, the Starport & City Tokens and the Power & Objective Markers.

Token Box **T1 holds the Battle Dice, the Resource Tokens and the Zero, Chapter & Initiative Markers.**

Token Box T2 holds the Imperial Ships, the Number & Event Dice, the Blight, Free City & Free Starport Tokens and the Ambition, Out of Play, Overflow & both short Path Markers.

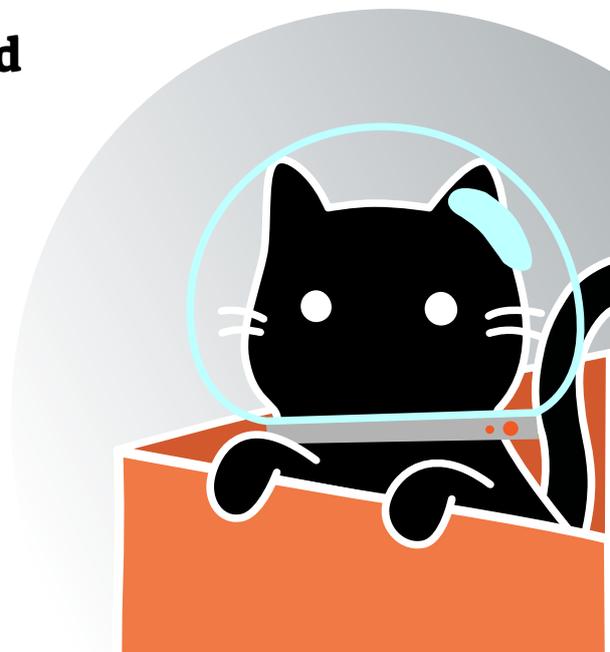

The Fate Boxes **F1 & **F2** hold the Fate Tokens matching the number of the corresponding Fate.**

The Tokens for Fate 20 & 21 are placed on top of the other Tokens as shown.

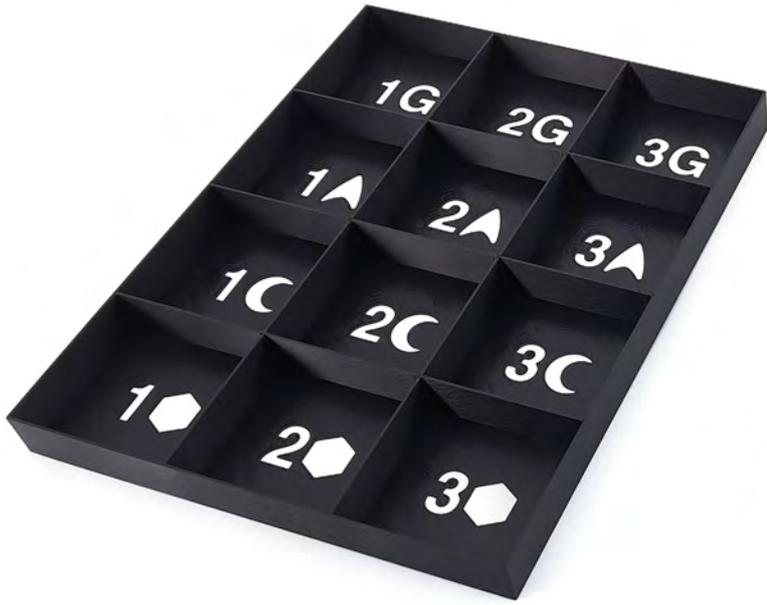

Miscellaneous Box M1 holds the Fate & Leader Cards, the Chapter & First Regent Tile, the Rules Booklet and both long Path Markers.

The Replacement Pieces Box **RP1 holds the wooden Player Pieces, if they get replaced by the plastic miniatures.**

Map Tray Boxes **MT1 & **MT2****
store pieces from the map
inbetween Campaign Acts.
The Lid only fits on **MT2.**

The Card Boxes C1 - C4 hold all Fate, Lore, Campaign, Base, Action, Scrap and ♦ Cards.

Board Game Insert

Component Storage

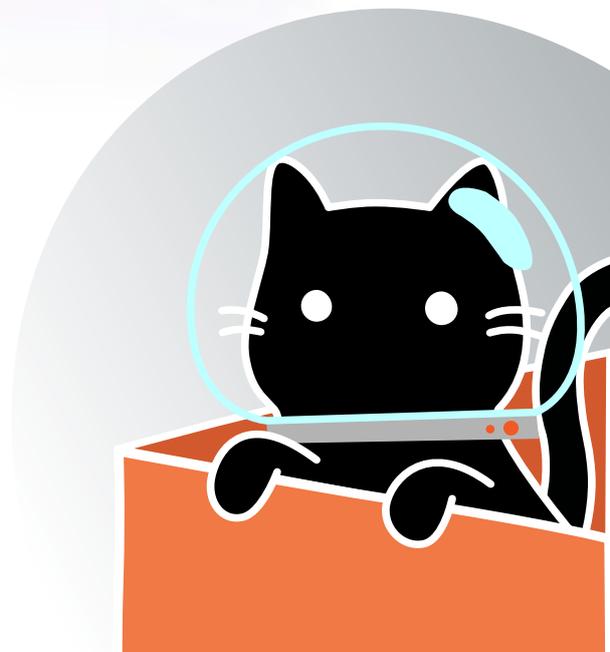

Place the Map Trays **M1 & **M2** into the Game Box.**

If you have Option 2 , just place the original ones in the same manner.

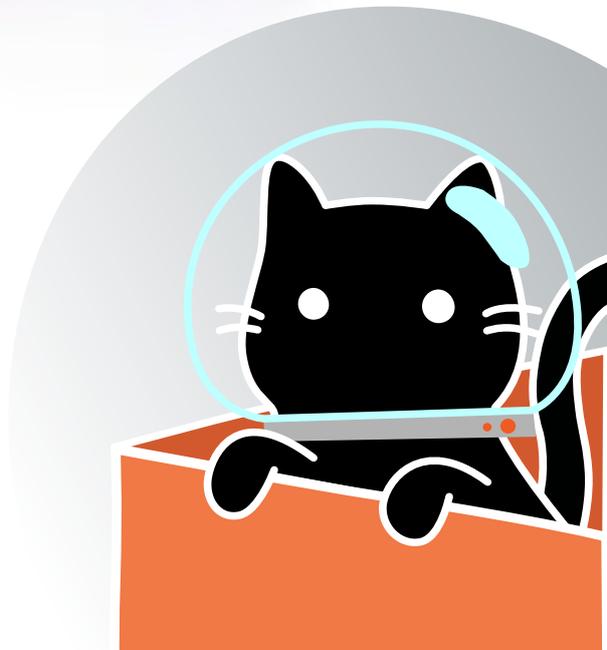

Place the **Map** and **Player Boards** on top as shown.

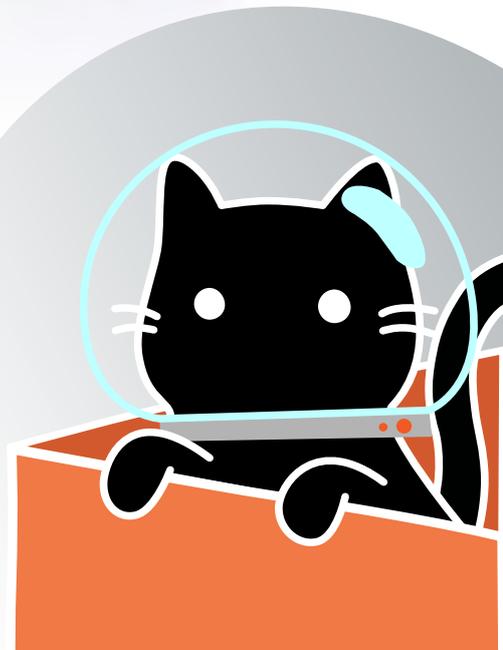

Continue with the **Flagship Boards**, **Rule Books** and **Player Aids**.

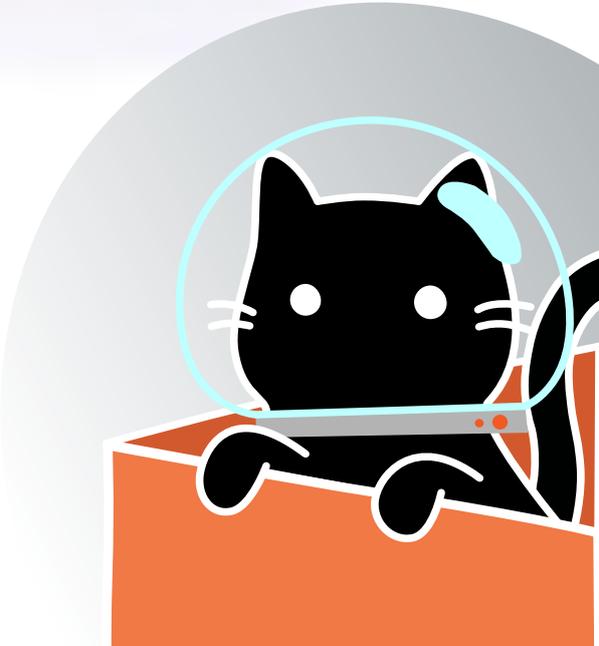

Place Player Boxes P1 - P4 in the corner.

Put the Campaign Log in front of it.

Proceed with Card Boxes C1 - C4.

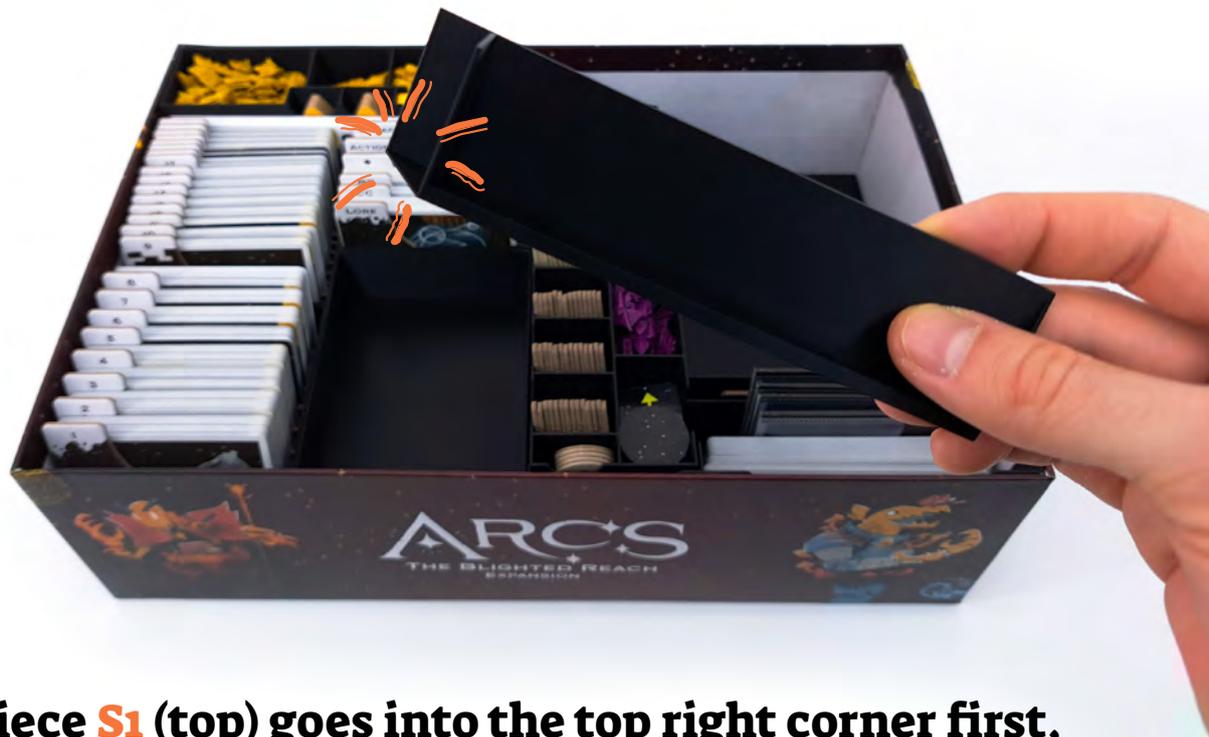

**Place Fate Boxes F1 & F2
next to the Card Boxes.**

Add Token Boxes T1 & T2 on top.

Support Piece **S1 (top) goes into the top right corner first, since Replacement Pieces Box **RP1** (bottom) slides on top of the highlighted corner of **S1**.**

The highlighted extended edge of **RP1 secures **T1 & T2** and **F1 & F2** into place (see next page).**

Slide the Miscellaneous Box **M1 into place as shown.**

The highlighted corner secures the Token and Fate Boxes as well.

Together with **S1, **M1** locks the whole insert in place now.**

How to print your digital STL-files

General Settings

- **Nozzle Diameter: 0.4mm**
- **Filament: PLA**
- **Nozzle Temperature: 210 – 220 °C**
- **Height of first layer: 0.2 mm**
- **Height of other layers: 0.2 – 0.3 mm**
- **Number of perimeters: 2**
- **Infill: 20 %**
- **Supports: None**

STL-File Information

Every file needs to be printed once, except the filename says otherwise: **CS1x4.stl** – print this part **four** times.

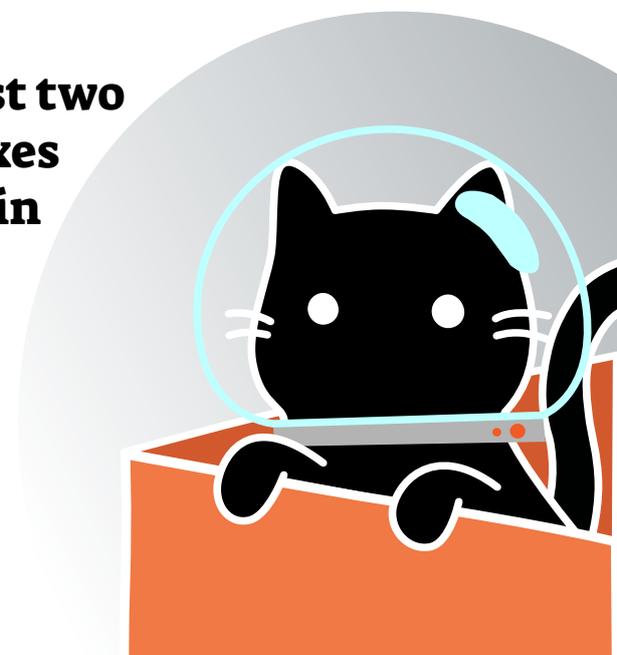

Print card dividers with **a color change after the first layer**. This can be done with most slicers and does not require a multi-material printer.

All STL-files are already orientated correctly to print them

Arcs File Information

Place a manual color change for the last two layers (each 0.2 mm) on Fate Token Boxes **F1** and **F2** to have the numbers printed in a different color.

...

How to print your digital STL-files

...

You can either print the Map Trays in one color (**MT1_SingleColor** & **MT2_SingleColor**) or print them with a white background behind the numbers and symbols:

- Load **MT1.stl** and **MT1_Background.stl** into your slicer.
- Move both of them, so **MT1_Background.stl** aligns with the cutouts on **MT1.stl**.
- If you own a Multicolor 3D Printer, proceed like you would with any multicolored print.
- If you don't own a Multicolor 3D Printer, you can still print the parts in two colors. Search the internet for **Multicolor prints with a single extruder** to find guides for your specific 3D Printer and Slicer. When you own a Prusa 3D Printer and you use Slic3r, you can set the number of extruders to 2, add „M600“ as a custom Tool change G-code and disable the Wipe Tower.
- Repeat the steps with **MT2.stl** and **MT2_Background.stl**.
