How to print your digital files

General Settings

- Nozzle Diameter: 0.4mm
- Filament: PLA
- Nozzle Temperature: 210 – 220 °C
- Height of first layer: 0.2 mm
- Height of other layers: 0.2 – 0.3 mm
- Number of perimeters: 2
- Infill: 20 %
- Supports: None

File Information:

Every file needs to be printed once, except the filename says otherwise:

CS1**x4**.stl – print this part **four times**.

Print card dividers with a color change **after** the first layer. This can be done with most slicers and does not require a multi-material printer.

All STL-files are already orientated correctly to print them.

Token Box Information:

When printing Token Boxes T2, T3 & T4, add a color change before the last 0.6 mm.
