How to print your digital files

General Settings

- **Nozzle Diameter: 0.4mm**
- **Filament: PLA**
- **Nozzle Temperature: 210 – 220 °C**
- **Height of first layer: 0.2 mm**
- **Height of other layers: 0.2 – 0.3 mm**
- **Number of perimeters: 2**
- **Infill: 20 %**
- **Supports: None**

File Information:

Every file needs to be printed once, except the filename says otherwise:

Example: Z1_x4.stl – print this part **four times**.

Print card dividers with a color change **after** the first layer. This can be done with most slicers and does not require a multi-material printer.

All STL-files are already orientated correctly to print them.
